Dear Customer we would like to point out that while we source the very best timber and materials please keep in mind that timber is a natural living product that can shrink, warp, twist, split, expand, leak sap and crack. These characteristics are perfectly normal and beyond our control.

While we pressure treat most products against fungal attack and decay the treatment will not stop mould growth which is not harmful to the timber but does look unsightly. We would strongly recommend a good quality exterior treatment is applied to your product as soon as it is fitted and the weather permits. We have a range of suitable products in our branches. In the event of a proven manufacturing defect the sellers total liability under no circumstances will exceed the price of the timber, the seller shall not in any way be responsible for any consequential costs or losses. Colours and shades may vary from photographs in the brochure and we reserve the right to change designs and specifications without notice. Made to order products can not be exchanged or returned. Pricing errors are just that, errors and the managements decision is final. See website for full terms and conditions.

**MADE TO ANY SIZE**

## Stronger tensile strength than concrete

The concrete post cracked and could not therefore recover, rendering the post non-serviceable. The Eco Fencing posts deflected the same amount, it follows therefore that the Eco Fencing posts possess a significant tensile strength that concrete posts do not.

### Watermarks

During the extrusion process the PVC granuals are heated, the molten PVC is then fed into the tool and immersed in water to cool the PVC down. When the gravel boards or posts are packed the residual heat can cause the boards and posts to sweat and this can cause a blotchy pattern as shown below in the picture. This is perfectly normal and after a few weeks in the sun and fresh air they will weather naturally.

### After unpacking with watermarks

After a few weeks of being aired

### SUPASPIKE

# BESPOKE REDWOOD GATES

## IMPORTANT

These gates are untreated and will require treatment.

A high quality paint is required and we would recommend Teknos for this.  
A range of colours are available from all of our outlets.

**ALL GATE MEASUREMENTS ARE TO THE HIGHEST POINT OF THE GATE**

**MORTICE JOINTS**

**ROUNDED EDGES**

**QUALITY FINISH**

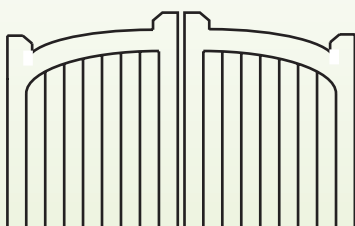

**GLULAM FRAMES**

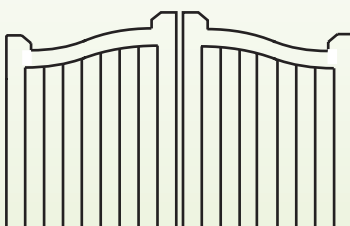

Use a high quality water repellant on your gates

See page 58

### NOTE

Please note Timber Gates by their very nature may move or twist and splits and shakes can occur. This does not affect the longevity of the product and the application of preserver, primer and paint will reduce this.

**Preserver - 3l £59.99**

## IMPORTANT

Having spent a considerable sum on your bespoke gates it only makes sense to protect them with the best products.

Atkinsons strongly recommend Teknos paint to treat your bespoke redwood gates, we have found over the years that popular brands of treatments that some customers have used just are not suitable. The paint must be micro porous and of a superior quality. In general expect to pay upwards of £20 per litre. The price reflects the quality of the treatment being used.

If not using a paint a high quality treatment must be used such as Hicksons Decor woodstain, again this is micro pourous and is available in various colours.

**Full Range Of Quality Paints And Stains In Stock**

# MADE TO ANY SIZE

## BESPOKE DRIVEWAY GATES MADE TO ANY SIZE

Also available made from Iroko hardwood cost is 3 x the cost of standard redwood gates

NOTICE: All Hardwood gates are supplied oiled. A good quality teak or danish oil should be used to keep them looking pristine and protected

## FIELD GATES

Atkinsons 5 Bar field gates are hand made and pressure treated for a longer life.

A traditional 5 bar field gate can be made to any size. Available as a standard gate or with a crook fitted if required. Made from planed tanalised timber with morticed joints and screwed braces. Please note these are heavy duty gates not standard field gates.

10' x 8'	£299.00
12' x 10'	£380.00
12' x 12'	£480.00
14' x 12'	£580.00
16' x 10'	£630.00
20' x 10'	£730.00

### TIMBER BASE NOT SUITABLE FOR HOT TUBS

Timber bases consist of the following :

- Tanalised timbers
- Timber support pegs
- Fully fitted
- NOT SUITABLE FOR HOT TUBS
- NOT SUITABLE FOR HOME GYMS

### STEEL PINS

SIZE - APPROX	PRICE
18"	£7.99
36"	£14.99

### STEEL BASE PRICES FITTED\*

SIZE	PRICE
3.0m x 3.0m	£1300
3.6m x 3.0m	£1400
3.6m x 3.6m	£1650
4.6m x 3.0m	£1750
4.6m x 4.0m	£1850
5.6m x 3.0m	£1850
5.6m x 4.0m	£2100

Steel base kit consists of galvanised steel supports concreted into the ground with a pressure treated frame fixed to the steel supports

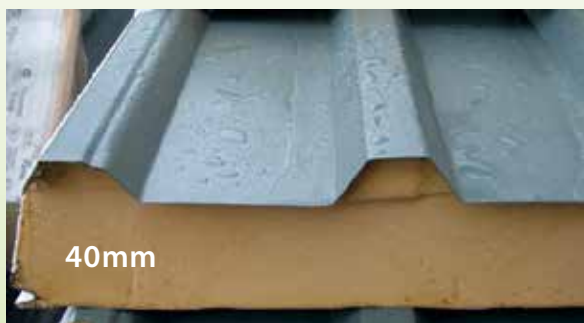

**Please Note:** If you are building your own base kit the foot print is metric. Large sheds will have a split floor so a centre support will be needed. Floor bearers always run the longest side of the shed. Allow for a double joist in the centre for 10ft sheds and above as the floor comes in 2 sections.

**A SOLID LEVEL** (like a snooker table) base must be in place.  
Flags, concrete or decking. There **MUST** be **CLEAR ACCESS** to the site.

### 40mm Insulated Steel Roof

SIZE - APPROX	PRICE
Per Sq M Fitted	£123.79

Including Fascia fitted

### WE RECOMMEND FITTING OF BREATHABLE MEMBRANE

Membrane Benefits:

- Prevents Condensation
- Improves Energy Efficiency
- Provides A Breathable Barrier
- Resistant To Tears
- Prevents Water Ingress

## CUSTOMER NOTICE

Timber is a porous material and as such a good quality treatment / water repellent should be applied to your building.

We recommend Teknos, Barretine or Aquapel, stocked at all our branches. Guttering is also a worthwhile addition

Our buildings come pre treated against rot and insect infection but we would still highly recommend the building is also treated with a suitable water repellent to preserve the quality and life of the product. The company or seller shall not in any way be responsible for additional consequential costs or losses. See website for full terms and conditions

- 2' 6" Door
- 5 Different Door Positions

## PLEASE NOTE: SHAWS SHEDS ONLY

All dipped buildings are pre-treated in a water based solution, however to extend the life of your shed we recommend that you treat them again within 3 months of erecting and yearly thereafter. As wood is a natural product some expansion and shrinkage can occur. This is not something we can prevent.

### BASE PREPERATION

When buying any garden building it is necessary to construct a base for your building to be erected onto. As long as it is level and firm it will be suitable. This can be constructed from concrete slabs or by using tanalised floor bearers in the opposite direction to the floor joists which always run front to back. This only applies the Shaws shed range of buildings

**A BASE CONSTRUCTED FROM FLAGS IS IDEAL BUT MUST BE LEVEL LIKE A SNOOKER TABLE**

**ORDER ONLINE [WWW.ATKINSONSFENCING.CO.UK](http://WWW.ATKINSONSFENCING.CO.UK)**

Teknos Aquatop is a high build microporous paint which can be used on external windows and garden buildings. It has 40% solids which is important in building the coating film up and providing protection. It allows the timber to breathe which is important in controlling moisture. Aquatop is also elastic enough when natural movement occurs in the timber. Flexibility in the paint is important for durability. We recommend a 3 part application as below.

**Step 1** - Apply preservative

**Step 2** - Apply primer, this includes a knot suppressant (does not stop sap leakage)

**Step 3** - Apply 3 coats of the topcoat to the outside, 2 inside.

## OPTIONS & AFTERCARE

We can offer many options along with your building, including the following.

1. Extra doors or windows
2. Full insulation to walls roof and floor if required
3. Electrics including distribution board, lights and sockets

## SELF MAINTENANCE

### IMPORTANT INFORMATION

#### Hinge Adjustment & Board Movement

The hinge is a simple 2 part ball joint. The lower part is screwed securely into the frame and not movable. The top half is screwed straight into the window and sits on the ball joint on the lower half, this top half is adjustable.

To adjust the top part needs to be spun either clockwise or anti-clockwise until the door or window fits snug.

Time and patience is the key to adjusting doors and windows.

#### Board Movement

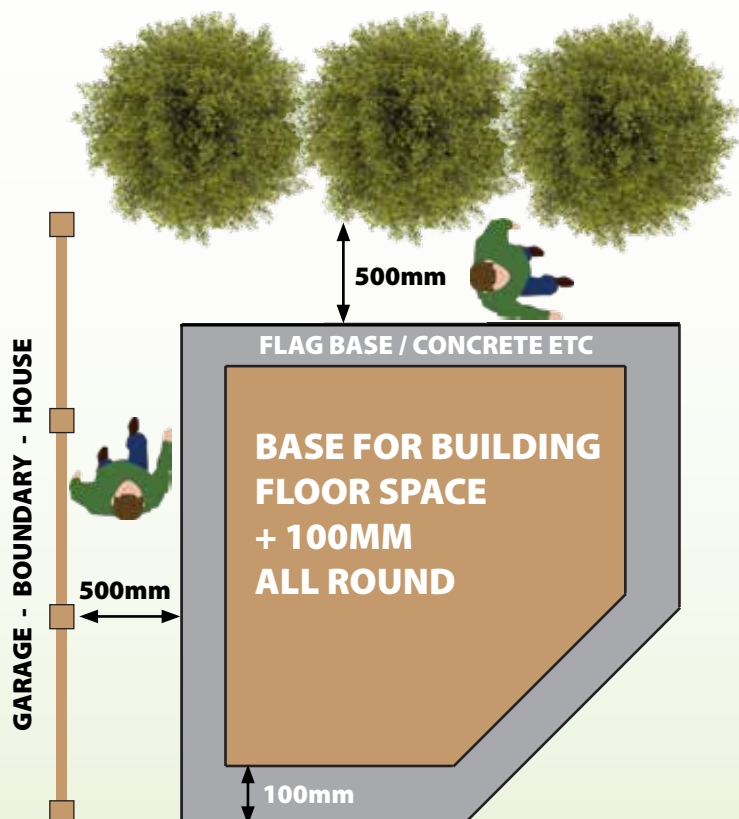

Cabins and summerhouses are based on a floating system, i.e the boards will move with atmospheric conditions. If gaps appear in your building something is holding the boards and stopping them from floating and dropping into position.

This could be a screw, nail, cable, picture frame, shelf, paint, varnish or other. Simply remove the fixing and tap the boards down. Some force may be needed to get the boards into position but this is normal.

We can send a joiner to take out the screw or cut away paint etc but this will incur a call out charge of £200. This is a simple procedure for the customer to carry out

## SUITABLE BUILDING BASES

- **UNEVEN FLAGS**
- **UNEVEN GROUND**
- **NOT SECURELY FIXED**
- **OVERHANGING TREES, BUSHES**
- **PLASTIC BASES NOT SUITABLE**
- **LEVEL LIKE A SNOOKER TABLE**

### KEY POINTS FOR BASES

- Concrete base min 75mm must be floated off
- Timber base with support posts every metre square
- Must be perfect finish and level
- 500mm clearance only applicable to cabins and summerhouses

**BOUNDARY GAP OF 500mm ONLY APPLIES TO BUILDINGS ON PAGES 44 -52. OTHER BUILDINGS CAN BE 300mm**

### IMPORTANT

PLEASE READ THIS BASE INFORMATION

**WE STRONGLY RECOMMEND USING A FLAG BASE**

**Any return to site due to an unsuitable base will incur a charge of £250 to return and install the building at a later date.**

## CABIN ORDER PROCESS

1. Visit our showsites and choose your building
2. Place your order and secure your building with a 50% deposit
3. Building will go into production and we will contact you when it arrives (Timescale will vary)
4. Final payment on arrival of building secures delivery and fitting date. Approx 2 - 3 weeks after arrival
5. Fitting date arranged. Fitting time can vary depending on complexity of building and time of year.
6. Cabin fitted
7. All prices are supplied and fitted in Zone 1 (see page 26)

ALL BUILDINGS MUST BE PAID IN FULL BEFORE INSTALLATION

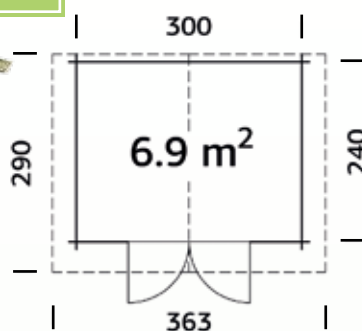

\* BUILDING REQUIRES PLANNING PERMISSION

### Tanalith E

Tanalith E is a water based preservative designed for pressure impregnation of timber fixed into the cell structure. Tanalith E treated timber gives long term protection against Fungal Decay and Insect Attack as long as the timber is treated in accordance with the correct end use. Tanalith E **DOES NOT** protect against mould as whilst unsightly, mould does not degrade the timber. We would strongly recommend in all instances that all pressure treated timber is coated once installed with a suitable product.

### Mould

Mould fungi can grow in the water layer on wet and damp surfaces as you may have seen in bathrooms. The growth is often fluffy and may be white, green, black or coloured, depending on the species and presence of spores. On timber mould feeds on free sugars and starches naturally present in the sapwood of timber. Mould needs the correct temperature range, moisture and food source to grow and in the case of timber over recent years the autumn is getting wetter and milder for longer and is giving ideal conditions for mould growth. There are a number of mouldicidal washes on the market which could help with any occurrences of mould. To avoid mould coming back timber should be coated once dry with a suitable product. Mould does not degrade timber.

### Timber

Timber is a natural product, the timber from each tree will behave differently from the tree next to it and pieces of timber cut from the same tree will behave differently from the piece next to it. Each piece will have different strength characteristics, different treatability, different natural durability and a different susceptibility to mould and this entirely normal with timber products. It can split, warp, crack and move which is beyond our control.
